This is done by creating a transaction (saving the file to disk), and then editing the original using the transaction. A transaction requires a combination of a user action and a time interval to become active. For example, the user can create a transaction for a drawing, but only after the drawing has been completed. If the user closes the file, or edits a file while a transaction is active, the transaction becomes invalid. Transactions may be cancelled at any time using the "Transaction management" tab, which allows one to modify various items in the transaction. AutoCAD will allow the user to open multiple drawings, and multiple transactions, within the same session. These drawings will be saved under a single file name, which may be of.dwt,.dwg,.dwg3 or.dwt3 file format. AutoCAD allows the user to save the entire session in.dwt3 file format, allowing for permanent, non-volatile storage of all changes made during a session. A session is typically defined as starting and ending on the same date. Editing One of the strengths of AutoCAD is its text editing system. The type of editing is accomplished through a drawing area, where the various editing functions are provided. Document properties – After drawing is saved, it can be opened using "Document properties" dialog box. "Document properties" dialog box allows the user to set properties of the document such as page orientation and page size. Drawing properties – After drawing is created, it can be opened using "Drawing properties" dialog box ca3bfb1094
