Building on the power and ease of use of the original Harmony Engine, Harmony Engine Evo incorporates Antares Evo Voice Processing Technology for faster, more accurate pitch detection, smoother, artifact-free pitch shifting, and seamless, natural-sounding throat modeling. And with the ability to create virtually unlimited jazz styles, vocalists can now create everything from soulful pop, modern r&b, classic jazz, or any combination of these styles, directly in the Producer. Auto Key and Scale Detection Harmony Engine Evo includes an innovative Smart Key and Scale detection that will automatically detect the key and scale of the song and automatically place the synth track into the key and scale of the song. Auto Key and Scale detection greatly improves results since vocals and other audio tracks will always be in the right key and scale. Auto-Tune Access & Essential Auto-Tune Features Harmony Engine Evo includes the new Auto-Tune Access feature that delivers an automatic clean version of a vocal that will have the Auto-Tune sung over it. With the new access feature, you can now quickly and easily access your Auto-Tune data and apply it to other vocal sections. When we first introduced auto-tune in Harmony Engine Evo we stated that this tool is different from other tools and that this tool would empower the vocalist by becoming their pocket studio. Well the new auto-tune access feature is yet another example of what we meant. There is no other automatic key and scale detection tool like this one on the market.
