One aspect of Photoshop Elements that isn't identical to the main version is that, in addition to the main version's Focus Merge and HDR Merge filters, you will have three more to play with: Blur Merge, Drama Merge, and Frame Lock Merge. Further details of the new features can be found in this post. An Adobe spokeswoman confirmed that the planned discontinuation of Photoshop's 3D features for Mac and Windows is real. "3D on Mac and Windows is being sunsetted so that customers can now move to Substance 3D for Mac and Windows," she said. The repro bill for the 3D changes for Windows and Mac is more than doubled in a year, according to the company, so while it can't just leave the business, it can trim its operating costs. Adobe has more than doubling its R&D costs over the past three years, and because the changes don't involve new hardware, the company can't use the education customer discount to justify the hardware costs. The move to Substance will also impact the online services, since some of Photoshop's training and videos are provided through the 3D programs. Adobe has notified all customers that it will be closing the user access and support pages over the course of the summer, although it will keep the help articles online. The demise of 3D was announced in late 2017, when Adobe debuted its exciting new Adobe Creative Cloud State of the Computer vision platform announced earlier this month. The main changes are a shift from using a dedicated GPU for 3D to using the CPU, and also the introduction of machine learning models that can power some of the most complex routines. This means that Photoshop's 3D feature set can potentially be replaced by machine learning models.
