First, you must obtain a cracked version of the software from a trusted source. Once you have downloaded the cracked version, you must disable all security measures, such as antivirus and firewall protection. After this, you must open the crack file and follow the instructions on how to patch the software. Once the patching process is complete, the software is cracked and ready to use.

When these files are exported to the print process, they lose their color depth (the color separation, resolution, and saturation) and all colors are altered and printed mixed, or tinted, in the CMYK process. It is important that all images be 90% CMYK (or, if you are colorizing the image, 100% CMYK) to ensure they print accurately.
