Fluid Traced Median Filter is the newest filter in Creative Cloud Continue. Apply this filter to create more realistic edges and shapes, therefore enhancing organic images. What's interesting is that this filter works across all your Photos, Adjustments, and Documents, too. The Adjust Color category is now called Color Flaws. This is the direct result of Lightroom CC's color improvement functionality. Smart Radius Match, a new Smart Radius feature in Lightroom CC, automatically fills in the shadow of your subject with the subject's color, thus helping you snap a sharp, sharpened photo. Even with your camera's white light source, there are times when the shot is not perfectly white without taking into account the subject's color. The new Smart Radius feature consistently fixes the white balance of your subject's face. Adobe has streamlined the Photoshop CC workflow by offering previews of specific adjustments and filtering in the Develop module. The new 7th Sense technology is aimed at users who often need to make adjustments. While in play, white lines appear on-screen showing the confidence areas of an adjustment. It lets you know whether or not the adjustment is appropriate or if your image can be improved in another way. Harvest retains, views, and moves images within Adobe Creative Cloud. With this new Cloud-based technology, you can easily import, organize, view, share, and save favorite stills. The Share for Review option shares your edited pictures on some social network sites, such as Facebook and Twitter. Clicking the Share for Review button displays the Share dialog box where you can view, make comment, and share the photo with your friends, family, and other people.

You can create your own website in just moments through the use of the program's web page creation tools, and create a host of different templates for your site, including corporate, restaurant, hotel, and even mobile versions. All the templates are responsive meaning that they automatically resize themselves to the screen size it is being viewed from when the site is loaded up. You can easily bring your content to the light by uploading a picture or a video directly from your computer. The responsive website creator is a great solution for these clients, and the program allows you to include and optimize elements of a page for any device size screen. So, you don't need to do a lot of rework when you're ready to view your site on your smartphone, tablet, or even a desktop monitor. Adobe's good-quality website design suite is an excellent tool that is aided by the Adobe Sensei. The Adobe Sensei is a machine learning tool that is powered by the AI services (Artificial Intelligence) and helps you create amazing designs, finishing off the project in seconds.
