Aug 11, 2018 - Have a Buy Instead Of Consuming Pills At The Counterclines.pdfWith a goal to increase the database of available information about bio-diesel, the Government on Saturday launched a portal called "Biofuel Regulator Information (BRI) Application", whose aim is to "provide information on bio-diesel to farmers and other authorities". "There is enough information on hand for the authorities of the state to provide subsidy to farmers, if they so wish," Union Biofuel secretary Subrata Ghosh told reporters. He said Biofuel has over 12 crore consumers in India and 20 lakh farmers. "It is a step forward to open the biofuel market to many more farmers. We also hope to give more impetus to industry," he added. The BRI application allows owners of biomass energy plants to file application for registration and has the objective of increasing the pool of information that can be shared with various authorities. It is also an enabling platform to monetize unutilized biogas and utilise the biomass into energy through distillation, gasification or synthesis through use of an appropriate process. in both the NuCamp and Ronin (which were used in the SOSCAL test to produce the same 4-km static geometry), compared to the OpenFOAM results in the bottom row. The difference between the EFACS run (top row) and the standard OpenFOAM run (bottom row) is quite clear for both the 2D, 1.25D, and 3D discretizations. The bottom row of table \[tab:CDetMcomp\] shows the comparison of the two stiffened discs (YJ-2D and TK-2D) with the EFACS runs, while the top row has the same comparisons but with YJ-1.25D and TK-1.25D stiffened discs. We see from table \[tab:CDetMcomp\] that the stiffened discs have a much lower diffuser pressure variation, as expected, since the transients are governed by more rapid pressure variations than the global discretization. \[tab:CDetMcomp\] Conclusion ========== The focus of this article is on the use of iso-parametric finite volume discretizations. The EFACS finite volume method uses the same construction as the Finite Volume with Explicitly Correlated
