Yes, Photoshop CC 2015 is a full standalone application with no server-side processing, so there's no need to provision or pay for a hosting plan for your work. If there are shared folders or other options for collaboration that you'd like to explore, you may find those helpful. If you have any questions about the PDF processing options, we'll catch them on Twitter @Adobewhatsoever you should know that an integration preview will be rebuilt next week. Adobe is providing recent previews for the CC tools so the public can help identify issues early. If you do encounter problems, you'll also have the ability to report issues directly to Adobe Technical Support. Note that some of the bugs we find may require a re-install or update of one or more components. This is a tool I've used for years, but have rarely enjoyed giving my full attention — mostly because I can spend hours in Illustrator or Dreamweaver, and feel no need to change my workflow for the sake of a tool. I never liked the limitations of having to use a Mac for the professional, and would prefer to see the same tools on an equally powerful and portable platform that could run on most types of computer. I'm looking forward to this review. I really like the features of Photoshop, but for the longest time I was hoping I can get some real-time intelligent approval in all work that I do. Photoshop does that job, and does a very good job. The problem is that you can only edit the selected only images in a document. That's a nice feature, but that feature is killing me for the whole professional workflow. I can't even edit my other images from Photoshop, I have to switch to another application, like InDesign, Illustrator, or Dreamweaver. Also, this is only available in the 2015 version of the application. I hope that future updates will bring this feature to older versions.
